## Malayalam Web-based Mail Server

Web mail solution for mail server based on Qmail, Vmailmgr and Courier-IMAP running on Redhat 7.0. It is a light weight and very fast solution to provide an easy-to-use web interface in Malayalam. It is based on **maildir** structure and directly reads mail from the server's disk. This solution is developed using JSP and the Javamail API and does not use Java on the client side. This gives the user complete access to his POP3 or IMAP mail boxes via an easy-to-use web interface.

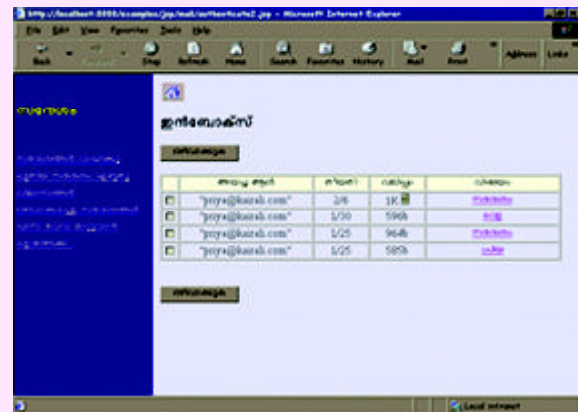

## POTENTIAL BENEFICIARIES

- ✂ Small and medium ISPs.
- ✂ Business Organisations.
- ✂ Government Sectors.
- ✂ Multilingual Portal Developers.

## FEATURES

- ✂ Qmail, Vmailmgr authentication support.
- ✂ 100% maildir based.
- ✂ IMAP support.
- ✂ Basic folders support.
- ✂ User managable folders.
- ✂ Extensive MIME support.
- ✂ Easy administration.

## EXPANDABILITY

The server can be extended to support any IMAP compliant mail server running on Linux platform.
